
Carechucho

Release 0.0.1

Alex Granada

Nov 08, 2025

CONTENTS:

1	carechucho	3
1.1	main module	3
1.2	input module	3
1.3	res module	4
1.4	star module	4
1.5	traversal module	5
1.6	universe module	6
1.7	graph module	7
1.8	activity-editor module	7
	Python Module Index	9
	Index	11

This is some sort of interstellar explorer animal. Here you will find all the information you need to use it and contribute.

CARECHUCHO

1.1 main module

Main module for the project.

main.edit_activities(*acts: list[tuple[str, float, float]]*)

Opens a menu for editing the given activities list

main.main()

Main loop for the project.

1.2 input module

Definitions for advanced mouse input handling

class input.InputManager(*screen_width: float = 1, screen_height: float = 1*)

Bases: object

An old & fancy input manager from a js game.

get_bounding_rect()

get_mouse_buttons()

Updates the input state of the mouse buttons

get_mouse_position()

Updates the input state of mouse positions

get_values_fron_pygame()

on_blur(*e*)

Event handler for element blur (JS)

on_focus(*e*)

Event handler for element focus (JS)

on_mouse_wheel(*event*)

Event handler for mouse wheel movements

update()

Updates overall state

class input.MouseButtonState(**values*)

Bases: IntEnum

```
DOWN = 2

PRESSED = 1

RELEASED = 3

UP = 0
```

1.3 res module

Preloaded resources file

```
class res.Color(*values)
```

Bases: Enum

Preloaded colors

```
BACKGROUND = (0, 0, 25)
```

```
class res.Font(new_class_name, / (Positional-only parameter separator (PEP 570)), names, * (Keyword-only
parameters separator (PEP 3102)), module=None, qualname=None, type=None, start=1,
boundary=None)
```

Bases: Enum

Preloaded fonts

```
class res.Image(new_class_name, /, names, *, module=None, qualname=None, type=None, start=1,
boundary=None)
```

Bases: Enum

Preloaded textures

```
class res.Sound(new_class_name, /, names, *, module=None, qualname=None, type=None, start=1,
boundary=None)
```

Bases: Enum

1.4 star module

Definitions for stars & constellations

```
class star.Star(id)
```

Bases: object

Class for representing a star

```
get_activities_str() → str
```

Returns a string representation of this star

```
star.get_constellation_color(star: Star) → tuple
```

Get the color associated with a constellation. Args:

constellation_name (str): Name of the constellation.

Returns:

tuple: RGB color tuple.

`star.get_name_color(name: str) → tuple`

Get the color for the star's name based on its type. Args:

star (Star): The star object.

Returns:

tuple: RGB color tuple.

1.5 traversal module

Module for defining the road in the game

class `traversal.Traversal(graph, stats)`

Bases: object

Class for representing traversals along a given universe's graph

calculate()

Calculates the maximum path for the current traversal - Priorizes paths by maximum longitude and then minimum stat cost

draw(screen: pygame.Surface)

Draw the universe to a surface Args:

screen (pygame.Surface): The surface to draw the universe on

draw_donkey(screen: pygame.Surface)

Draw the donkey to a surface Args:

screen (pygame.Surface): The surface to draw the donkey on

generate_report()

Generates and opens a traversal report in the default text editor

get_origin_coords() → tuple[float, float]

Returns the screen coordinates of the traversal origin, or the current standing node Returns:

(tuple[float, float]): x,y coords

open_file_in_default_editor(filepath)

Opens a file in the user's default text editor.

play()

Plays the traversal animation from the beginning

set_origin(star: Star)

Sets the traversal origin and recalculates Args:

star (Star): The new origin

stop()

Stops the traversal animation if it's running

update(universe)

Updates any required per-frame internal variables Args:

universe (Universe): The universe the traversal is for

1.6 universe module

Module for defining the road in the game

class universe.Stats

Bases: object

Class representation of a donkey's stats at a certain moment

add_dst(*next_distance: float, use_only_initial: bool*)

Adds the grind associated with the star-star travel

add_out_star(*out_star: Star, use_only_initial: bool*)

Adds the grind associated with the star stay

burroenergiaInicial: float = 100

deathAge: int = 3567

static eating_energy_intake_from_health(*health: float*) → float

Returns the energy gain per grass Kg from a given burroEnergia level

get_death_causes()

Gets the death causes from the current stats

static get_eating_kg_per_year() → float

Returns how many Kg of grass the donkey eats per year

static get_health_from_energy(*energy: float*) → str

Gets the health name from a given amount of burroEnergia

is_deadly()

Tells if the current stats are deadly

pasto: int = 300

startAge: int = 12

class universe.Universe(*screen_width: int = 0, screen_height: int = 0*)

Bases: object

Class for representing and managing a graph of stars

draw(*screen: pygame.Surface*)

Draw the universe to a surface Args:

screen (pygame.Surface): The surface to draw the universe on

graph_from_file(*file_path: str*) → Stats

Load from a JSON file. Args:

file_path (str): Path to the JSON file.

translate(*dx: int, dy: int*)

Translate the universe by a given amount

update(*args, **kwargs)

Update universe's main logic

zoom(*amount: int, mouse_position: pygame.math.Vector2 = pygame.math.Vector2*)

Zoom the universe in or out by a given amount

1.7 graph module

Definitions for graph construction & management

class graph.Graph

Bases: object

add_edge(*from_id, to_id, weight=0*)

Add an edge to the graph.

add_vertex(*id, value=None*)

Add a vertex to the graph.

get_vertex(*id*)

Get a vertex by id.

get_vertices()

Get all vertex ids in the graph.

lock_edge(*from_id, to_id, value=None*)

Lock an edge between two vertices.

class graph.Vertex(*id*)

Bases: object

A vertex in a graph.

add_neighbor(*neighbor, weight=0*)

Add a neighbor to this vertex.

get_connections()

Get all neighbors of this vertex.

get_id()

Get the id of this vertex.

1.8 activity-editor module

Simple form for editing a list of activities

class editact.ActivityEditorApp(*root, acts*)

Bases: object

add_activity()

Adds an activity from the input fields

delete_selected()

Deletes a selected activity

edit_selected()

Patches an activity from the selection and input fields

on_select(*event*)

Triggered whenever the user selects a row.

refresh_table()

Updates the table.

- genindex
- modindex
- search

PYTHON MODULE INDEX

e

`editact`, 7

g

`graph`, 7

i

`input`, 3

m

`main`, 3

r

`res`, 4

s

`star`, 4

t

`traversal`, 5

u

`universe`, 6

A

ActivityEditorApp (class in editact), 7
 add_activity() (editact.ActivityEditorApp method), 7
 add_dst() (universe.Stats method), 6
 add_edge() (graph.Graph method), 7
 add_neighbor() (graph.Vertex method), 7
 add_out_star() (universe.Stats method), 6
 add_vertex() (graph.Graph method), 7

B

BACKGROUND (res.Color attribute), 4
 burroenergiaInicial (universe.Stats attribute), 6

C

calculate() (traversal.Traversal method), 5
 Color (class in res), 4

D

deathAge (universe.Stats attribute), 6
 delete_selected() (editact.ActivityEditorApp method), 7
 DOWN (input.MouseButtonState attribute), 3
 draw() (traversal.Traversal method), 5
 draw() (universe.Universe method), 6
 draw_donkey() (traversal.Traversal method), 5

E

eating_energy_intake_from_health() (universe.Stats static method), 6
 edit_activities() (in module main), 3
 edit_selected() (editact.ActivityEditorApp method), 7
 editact module, 7

F

Font (class in res), 4

G

generate_report() (traversal.Traversal method), 5
 get_activities_str() (star.Star method), 4
 get_bounding_rect() (input.InputManager method), 3

get_connections() (graph.Vertex method), 7
 get_constellation_color() (in module star), 4
 get_death_causes() (universe.Stats method), 6
 get_eating_kg_per_year() (universe.Stats static method), 6
 get_health_from_energy() (universe.Stats static method), 6
 get_id() (graph.Vertex method), 7
 get_mouse_buttons() (input.InputManager method), 3
 get_mouse_position() (input.InputManager method), 3
 get_name_color() (in module star), 4
 get_origin_coords() (traversal.Traversal method), 5
 get_values_fron_pygame() (input.InputManager method), 3
